Claim Rejections - 35 USC § 101

1. 35 U.S.C. 101 reads as follows:

Whoever invents or discovers any new and useful process, machine, manufacture, or composition of matter, or any new and useful improvement thereof, may obtain a patent therefor, subject to the conditions and requirements of this title.

2. Claims 1-17, 19-20, and 22 are rejected under 35 U.S.C. 101 based on Supreme Court precedent and recent Federal Circuit decisions because the claimed process is not (1) tied to another statutory class (a particular machine or apparatus) or (2) transforms underlying subject matter (such as an article or materials) to a different state or thing. See *In re Bilski et al*, 88 USPQ 2d 1385 CAFC (2008); *Diamond v. Diehr*, 450 U.S. 175, 184 (1981); *Parker v. Flook*, 437 U.S. 584, 588 n.9 (1978); *Gottschalk v. Benson*, 409 U.S. 63, 70 (1972); *Cochrane v. Deener*, 94 U.S. 780, 787-88 (1876)

To qualify as a § 101 statutory process, the claim should positively recite the particular machine to which it is tied, for example by identifying the apparatus that accomplishes the method steps, or positively recite the subject matter that is being transformed, for example by identifying the material that is being changed to a different state. The nominal recitation of computer apparatus in the preamble does not convert an otherwise ineligible method into a statutory process, since creation of intangible mathematical expressions does not constitute transformation of subject matter. See *Ex parte Langemyr* 89 USPQ2d 1988.

Claim 1 nominally recites “a keyholder,” in the preamble followed by a series of method steps for generating public keys. The method steps are directed to mathematical manipulations that can be performed by any machine that calculates and embody nothing more than abstract ideas. Further, the keyholder can be reasonably

interpreted to encompass a person mentally performing the mathematical calculations for generating public keys or a person manually performing the mathematical calculations for generation public keys using a pen and paper. Therefore, the process claimed by independent claim 1 is not tied to another statutory class and does not transform underlying subject matter.

Allowable Subject Matter

3. If claims 1-17, 19-20, and 22 are amended to overcome the above stated rejection under 35 U.S.C. 101, the claims would be allowed over the prior art of record. The following is an examiner's statement of reasons for allowance: the most relevant reference Guillou L. C. et al. "Cryptographic Authentication Protocols for Smart Cards," discloses GQ2 asymmetric authentication based on integer factorization (See page 445 col. 2 through page 448 col. 2). The GQ2 asymmetric authentication has a modulus n used for an RSA signature with v , where v is determined by $v=2^k$ with $k \geq 2$. The GQ2 asymmetric authentication does not disclose using $v=2^{b+k}$ where k is a strictly positive integer and $b=\max(b_1, \dots, b_f)$, where b_j (where $j=1, \dots, f$) is the highest integer such that $(p_j-1)/2^{b_j-1}$ is even.

Any comments considered necessary by applicant must be submitted no later than the payment of the issue fee and, to avoid processing delays, should preferably accompany the issue fee. Such submissions should be clearly labeled "Comments on Statement of Reasons for Allowance."
